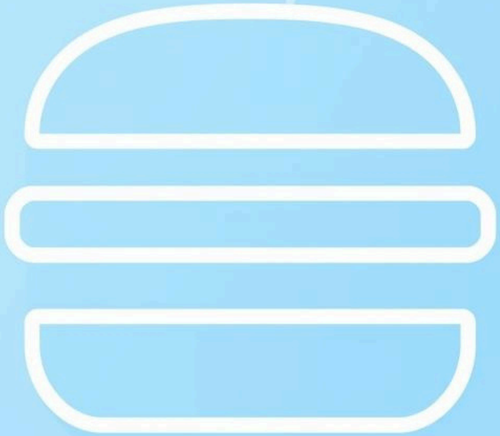
What is a Navbar?

Understanding the role of navigation bars in web design

A navigation bar, commonly referred to as a **navbar**, is a menu that helps users navigate a website. It usually appears at the top or side of a webpage and contains links to key pages or sections, enabling quick access to the most important content.



75%

75% of users indicate they prefer websites with clear navigation, highlighting the importance of a well-structured navbar for enhancing the user experience and retaining visitors.
